

WEB DEVELOPER - STAGE 1 ASSESSMENT

Congratulations on progressing to Stage 1 of our selection process.

We want to understand how you **think, design, build, and solve problems**.

PART 1

Design and build a **single-page landing page for the Crystal Kizor brand**.

Crystal Kizor is an architect, designer, entrepreneur, speaker, researcher, and creator building across several brands and initiatives, including:

- **Studio COKA** : Architecture, Interior Design & Construction
- **AKO Alliance**
- **ELEvated**: Furniture & Product Design
- **The Effective Architect (TEA)**
- **Speaking Engagements**
- **Alive and Free**
- Personal research, authorship, writing and content

Your job is to find the **best way to bring these different parts together under one personal brand**.

The page should help a first-time visitor quickly understand:

Who is Crystal Kizor? What does she do? What is she building? Where should I go next?

We will intentionally not tell you what sections to create or how to arrange the information.

We want to see your thinking.

WHAT WE ARE LOOKING FOR

Your landing page should:

- Create a clear hierarchy across the different brands and initiatives
- Feel cohesive rather than like a list of unrelated businesses
- Communicate Crystal's positioning clearly
- Make it easy to discover her work
- Create clear next steps for different visitors
- Work beautifully across desktop and mobile

- Feel premium, thoughtful, and distinctive
- Be technically well-built and fast

You may research Crystal Kizor and the listed brands using publicly available information.

BRAND CONTEXT

The Crystal Kizor ecosystem currently includes:

- **Studio COKA:** An architecture, interior design and construction studio focused on thoughtful, climate-responsive design.
- **AKO Alliance:** An initiative focused on expanding access to education and creating opportunities for children and young people.
- **ELEvated:** A contemporary furniture and product design brand creating functional, well-designed products rooted in African context, materials and ideas.
- **The Effective Architect (TEA):** An architecture education and media platform helping architects and built-environment professionals learn, grow and build better careers.
- **Speaking Engagements:** Talks, conversations and engagements around architecture, climate-responsive design, African cities, design, entrepreneurship and the built environment.
- **Alive and Free:** A Christian youth movement helping young people walk in truth, healing, freedom, identity, purpose and life in Christ.
- **Crystal Kizor:** Architecture, research, writing, media, ideas and other work that sits directly under the personal brand.

Your task is not simply to place these initiatives on one page.

Think about **how they connect, how they should be presented, what deserves emphasis, and where different visitors should go next.**

PROVIDED ASSETS

You will receive a folder containing:

- Selected professional photographs of Crystal Kizor
- Crystal Kizor logo/wordmark, where applicable
- Available logos for the brands and initiatives
- A small selection of relevant project or brand imagery
- Basic brand information
- Relevant links, where available

You are **not required to have final imagery for every section.**

Where an appropriate asset has not been provided, you may use clearly marked placeholders or suitable temporary imagery.

We are interested in how you **structure and design the experience**, not in your ability to source dozens of images.

You may also use publicly available information where necessary, but the information provided in this brief should be treated as the primary source.

PART 2 - AI PRODUCT THINKING

Crystal Kizor intends to develop useful AI-powered tools across this ecosystem.

Choose **one brand or initiative above** and propose **one AI-powered tool** that would genuinely serve its audience.

In **300 words or less**, explain:

- What the tool does
- Who it is for
- The problem it solves
- How someone would use it
- What AI model, API, or technology you would use and why
- How you would build the first working version
- Any important limitations, risks, or safeguards you would consider

You do not need to build the AI tool at this stage.

Candidates who progress may be asked to develop or demonstrate an AI-powered feature in a later stage.

PART 3 - ANALYTICS & IMPROVEMENT

How would you measure whether a website is performing well?

Explain:

- What you would track
- What tools you would use
- How you would use the data to improve the website

Scenario

A website receives **5,000 visitors in one month, but only 5 people submit an enquiry.**

What would you investigate, and what would you do next?

Maximum: 250 words.

SUBMISSION

Please submit:

- **Live deployed link**
- **Source code / GitHub link**
- **A short note (maximum 200 words)** explaining your thinking, key decisions, and technology choice

You may use any technology or framework you believe is appropriate.

You may also use AI tools. However, you must understand and be able to explain everything you submit.

Deadline: 4pm, Saturday, 10th October 2026

IMPORTANT

There is no single correct design.

We are assessing:

Thinking. Technical execution. Design judgment. Clarity. Initiative. Attention to detail.

Make the decisions you believe create the strongest experience.
